

# Templates - JS

## Programação Web 1

Passo a Passo:

1. Abra o terminal
2. Crie uma pasta para o projeto

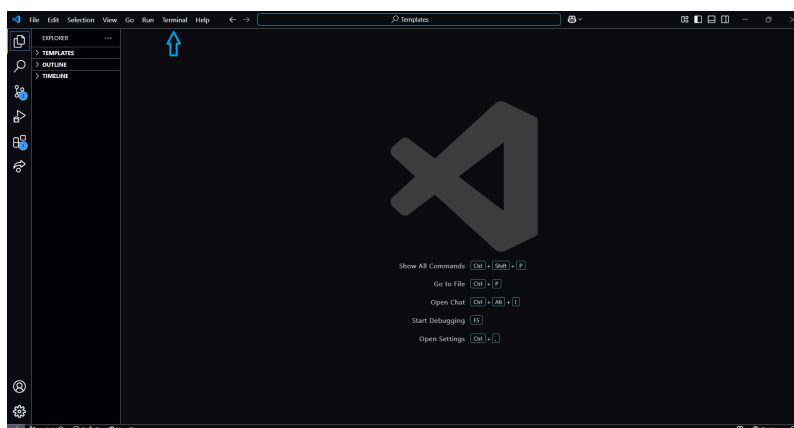

3. Entre na pasta do projeto

4. Abra o VsCode na pasta

5. Abra o terminal no VsCode

6. Digite no terminal

A terminal window with a blue border and three colored dots (red, yellow, green) in the top left corner. The text `npm init -y` is displayed in the terminal.

O comando `npm init -y` cria automaticamente um arquivo `package.json` com configurações padrão, sem fazer perguntas.

7. Instale as dependências necessárias para o projeto

A terminal window with a blue border and three colored dots (red, yellow, green) in the top left corner. The text `npm install express express-generator nodemon cookie-parser` is displayed in the terminal.

Instala as dependências Express, gerador de projetos, Nodemon e Cookie-Parser.

8. Rode o express-generator

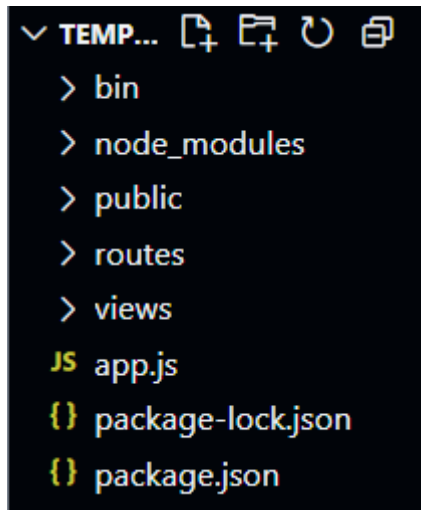

A terminal window with a blue border and three colored dots (red, yellow, green) in the top left corner. The text `npx express-generator --view=ejs` is displayed in the terminal.

Gera um projeto Express usando EJS como engine de visualização.

9. Instale as dependências que o express-generator incluiu no `package.json`

A terminal window with a blue border and three colored dots (red, yellow, green) in the top left corner. The text `npm install` is displayed in the terminal.

10. Sua pasta deve estar assim:

11. Crie um arquivo .gitignore clicando em

Abra-o, e digite node\_modules/.

Isso ignora a pasta `node_modules` no Git.

12. Para rodar, basta digitar no terminal do VsCode

13. Para ver o projeto, abra seu browser favorito e digite

Ou

14. Aí está seu projeto!
